Edison: Fitness data entities (schedules, exercise templates, session exercises, and workout sessions), endpoints and CRUD operations, and writing tests for the fitness data API
Ricky: finish the chatbot by giving it access to relevant user context from the app, specifically workout/progress data and limited recent chat history
Alex: Forgot password / reset password, also I can add requireAuth on the all users data routes like TA suggested (maybe make that route require some sort of admin auth), craigslist style trainer list, admin panel if time. Writing tests for authentication/registration and the above.
Jason: data syncup service & schedule services, related frontend UI & routing
